PROactive PRONUNCIATION

D to Voiceless “TH” Word Transition

The /d/ sound involves placing the tongue tip on the roof of the mouth just behind the front teeth on the alveolar ridge behind your top teeth. The tongue then must slide out and between the teeth to create the “th.” Feel how you will need to slide the tongue from the alveolar ridge over to between the teeth without releasing or letting go.

sad thing

mad thug

mud throwing

dad things

read the book

add these numbers

end that game

had them here

Did they win?

old thug

kid threw the ball

bald thin man

lied then stole

lend the tools

made this book

bold throw

wild theme park

load the truck

bird themed

hid them
