PROactive PRONUNCIATION

Flap T Words

The flap /t/ occurs between two vowels or /r's/ in an unstressed syllable (e.g., Vowel /t/ Vowel). Ultimately, what you produce is a very quick soft /d/. The flap /t/ can also occur between a vowel and an /ɝ/ or "r" sound since there is a small vowel before the /r/ in "er." An example of this is in the word "shorter," which would be pronounced as "shorder." Let's practice!
